

The following survey is part of a study being conducted by researchers at Children's Mercy Hospital in Kansas City, MO and Ann & Robert H. Lurie Children's Hospital of Chicago in Chicago, IL.

This research study is for adults and children with food allergies who are of Asian Indian origin. The researchers are exploring the types of foods which cause food-allergy reactions among adults and children of Asian Indian origin.

Research is always voluntary. The survey is anonymous and there will not be any information you give that can identify you or your child.

This study might be a good fit for you or your child if:

- You or your child is of Asian Indian origin
- You or your child has food allergies
- You have access to the internet to complete the survey

If you decide to have you or your child take part in the research survey, you would:

- Access the internet link below and answer the survey questions

There may be no direct benefit to your child from being in this research study. This information will be used to advance knowledge regarding allergies among individuals of Asian Indian origin.
